This is the sky in EARLY June at 11:00pm and LATE June at 10:00pm. The Sky Guide is drawn for Genesee County and other places 43 degrees north latitude. Planet positions are shown for mid-month, unless otherwise noted.

**VISIBLE SKY**

**Evening Planets:** Jupiter will be the bright object in the southwest night sky throughout the month of June. Saturn will be rising in the southeast during the early portion of the month, and working its way toward due south by the end of June.

**Morning Planets:** Venus will be rising before the sun on the eastern morning sky and visible by the middle of June.

**Phases of the moon**

- **1st Quarter:** June 1 & 30
- **Full Moon:** June 9
- **3rd Quarter:** June 17
- **New Moon:** June 23
Eclipse: The Sun Revealed
Opens Monday, June 19. Show times are daily at 2:30 pm.
Are you ready for the total solar eclipse of 2017? This show uses beautiful visuals to explore the historical and cultural view of solar and lunar eclipses, and explains the geometry that creates the awe-inspiring sight. Learn how to safely watch an eclipse, and about scientific discoveries that have been supported by total solar eclipses. Solar glasses, maps, and books about the eclipse available in the planetarium store. Great for ages 6 and up.
