This is the sky in February at 9 p.m. The Sky Guide is drawn for Genesee County and other places 43 degrees north latitude. Planet positions are shown for mid-month, unless otherwise noted.

**VISIBLE PLANETS**

**Evening Planets:** Saturn and Jupiter are visible in the early evening.

**Morning Planets:** Venus and Mercury are visible in the early morning.

---

**PHASES OF THE MOON**

- **New Moon:** Feb. 9
- **1ST Quarter:** Feb. 16
- **Full Moon:** Feb. 24
- **3RD Quarter:** Feb. 2

---

**How to use the Sky Map**

Hold the map over your head with “North” pointing towards the northern horizon on the Earth. The center of the map marks the point directly overhead. The position of the constellations on the map will match the night sky.
WE’RE OPEN for President’s Day! 
MONDAY, FEBRUARY 19
with a Special Show Schedule!
